The table below presents RHA Head Counts Over Time by Occupation from 2010-2023. The data includes various categories such as Category, Total, Combined LX Technologist, Medical Laboratory Technologist, Physiotherapist, Prosthetist-Orthotist, and others. The values in the table represent the number of employees for each category over the years.

The note at the bottom of the page indicates caution in interpreting this information as this report is based on point-in-time head count data, which does not reveal the number of positions added or removed, as there could be more (or fewer) part-time positions, vacant positions, special project staff, and vacation due to unusual differences, to name a few.

In 2016, a new row has been added to the report for Nurse Practitioners. Previously, Nurse Practitioners were included under Registered Nurses, but will be reported separately going forward.
