ILI Definition: ILI in the general population: Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza.

Note: In children under 5 years, gastrointestinal symptoms may also be present. In patients under 5 or older than 65 years, fever may not be prominent

Emergency Room (ER)

ILI Cases: The number of patients presenting to the ER with ILI during the 24 period.

Total Population: The number of patients seen in the ER during the 24 hour period.

Hospital Inpatients

Were there two or more ILI cases within a seven-day period, including at least one laboratory confirmed case of influenza?

LTC Residents

ILI Cases: The number of residents with ILI during the 24 period.

Total Population: The number of residents living in the facility during the 24 hour period.

Please Report each Wednesday
